

ECS Compactors

The ECS compactor is a raw material delivery system for extruders.

The compactor guarantees optimum, constant filling of your extruder, leading to higher yields. Compactors are available in various models, for example a [tube compactor](#), [hopper-compact](#) and the [side delivery compactor](#). Depending on your machine and requirements, a suitable compactor will be selected and dimensioned, for your product. The modular structure of the ECS compactors makes it possible to easily exchange or overhaul all used components.

Applications:

- delivery of powders and granules
- delivery of fibrous materials
- delivery and mixing of chemicals

We manufacture to customer specifications
